

In the language of your choice please pull all the yellow line trains headed to Huntington Station which take passengers. Your code should then be placed onto a container and run via the **docker run** command.

<https://developer.wmata.com/>

<https://developer.wmata.com/docs/services/>

<https://developer.wmata.com/demokey>

You should have 4 deliverables:

Dockerfile

Readme - Telling us how to build and run your container

code/script file

a harness script file - to run the container
